Success Case: This occurs on the condition that sensor is already deployed and the new location not already covered [sensor != null && location == null]

```
                    :Console                    :MapTable                    :Map

moveToNewLocation(sensor, location)

                       removeMap(sensor)

                    makeNewMap(sensor, location)

                                         m:=create(sensor, location)    :Map

                                                 add(m)
```
